Date: May 2026

Project: Retail Marketing Campaign Analysis

Findings:

- Campaign 6 best performer: 14.93%
- Campaign 2 worst performer: 1.34%
- Wines highest total spend
- Meat Products 2nd highest
- Wines & Meat strongest predictors of response
- 1629 out of 2236 customers (72.8%) did not engage with marketing campaigns

Recommendations:

- The majority of our customers do not respond to marketing campaigns.
- But if we target and take action based on the analysis we can seek for better customer response

Hypothesis Results:

- H1 — Income significantly predicts response
- H2 — Education significantly predicts response
- H3 — Older age groups are more engaged (56+ most)
- H4 — Household composition impacts engagement
- H5 — Purchase channel partially drives response

Overall Insight:

- Our marketing campaigns are not that responsive/successful
- Target high income customers (\$60K+)
- Focus campaigns on Graduate Level customers
- Prioritize customers 45 years old and above
- Target customers with no dependants
- Focus digital marketing on catalog and web shoppers
- Promote Wines & Meat in campaigns

Structured What, Why, How, Goal:

- What: Analyzing customer behavior and profile/demographics
- Why: To identify what factors based on our customer data, will lead to campaign engagement/performance
- How: SQL, Excel, Python, Tableau
- Goal: Taking something complex and making it clear - Turning raw data into actionable insights! In this case, Optimizing marketing strategies and targeting from my findings and insights in hopes to increase campaign response rates and overall campaign performance.
